

Executive Posture Audit Report

Report ID: REP-2A8022B2 | Period: Past 24 Hours | Generated: 2026-08-22 17:37:07 UTC | Environment: DEVELOPMENT LAB SIMULATION

1. Executive Threat Posture Summary

During the evaluation period (**Past 24 Hours**), SHALX NETGUARD monitored real-time telemetry across **2 discovered network assets (2 active online)**. A total of **1 security alerts** were evaluated (**0 Critical, 1 High**), resulting in **1 incident investigations**. Active perimeter containment maintained **1 active IP block rules**.

Security & Network Metric	Count / Value	Operational Status
Total Discovered Devices	2 (2 Online)	NOMINAL
Total Security Alerts	1	EVALUATED
Critical / High Threat Alerts	0 Crit / 1 High	ATTENTION
Active Forensic Incidents	1 Active / 1 Total	INVESTIGATING
Active Firewall Blocked IPs	1	ACTIVE ENFORCEMENT

2. Discovered Network Assets (2 Total)

Asset / Hostname	IP Address	MAC Address	Vendor / Manufacturer	Device Type	Status
web-server-01.local	192.168.1.10	00:1E:67:11:22:33	Intel Corporation	SERVER	ONLINE
workstation-pc.local	192.168.1.55	E8:9C:25:AA:BB:CC	Realtek Semiconductor	WORKSTATION	ONLINE

3. Security Alerts & Triage (1 Recorded)

Alert ID	Severity	Category	Source IP	Target IP	Signature / Description
ALT-TEST-001	HIGH	RECONNAISSANCE	192.168.1.200	192.168.1.10:80	Suspicious Port Scan Activity

4. Active Forensic Incidents (1 Cases)

Incident ID	Title / Summary	Severity	Status	Assigned	Created At
INC-TEST-001	Active Network Reconnaissance Investig	HIGH	INVESTIGATING	testanalyst	2026-08-22 17:37

5. Active Firewall Threat Containment (1 Block Rules)

Blocked IP	Reason / Threat Context	Blocked By	Blocked Timestamp	Status
192.168.1.200	Port Scan Threat Actor	testanalyst	2026-08-22 17:37	ACTIVE

6. Contextual Defense & Hardening Recommendations

- Prioritize forensic triage and containment for the 1 active Critical/High security alerts recorded.
- Review and audit 1 active perimeter firewall containment rules for expiration and threat intelligence correlation.
- Audit Windows endpoint security configurations and ensure critical OS patches are applied.

- Verify SSH authentication hardening and inspect service daemon logs on discovered Linux servers.
- Continue automated host health telemetry ingestion across all 2 active network assets.
